

MERYEM GÜLDÜREN

SOFTWARE ENGINEER

meryemguldurens@gmail.com | www.linkedin.com/in/meryem-gulduren | +905414207753

SUMMARY

I am a 3rd-year Software Engineering student at Kocaeli University with a strong interest in artificial intelligence and web development. I actively work on projects to deepen my knowledge in these fields. As a highly motivated and adaptable individual, I am eager to learn, collaborate effectively in team environments, and apply my theoretical knowledge through practical experience.

EDUCATION

Kocaeli University

Software Engineering

September 2022 - Present

Osmangazi Science High School

Grade : 98

September 2018 - June 2022

PROFESSIONAL EXPERIENCE

Keepnet Labs

Software Intern

January 2026- February 2026

- Contributing to the development of human-centric social engineering scenarios and phishing simulations at Keepnet Labs to enhance corporate cyber resilience and improve security awareness processes.

Member of the HSD (Huawei Student Developers)

Technical Team Member

October 2025- Present

- Organized technical workshops on Huawei Cloud, DevOps, and AI/ML, and mentored student teams for hackathons and projects. Additionally, I developed the community's digital infrastructure, including automation bots and web portals, to ensure sustainable technical operations.

Arlentus Control

Full Stack Developer

July 2025 - January 2026

- Developed "Project Proposal," a system for creating client templates integrated with internal company systems.
- Applied modern backend architectures, including Onion Architecture, Repository Pattern, and SOLID principles to ensure a scalable and testable structure.
- Utilized .NET, EF Core, and MySQL to deliver high-quality solutions aligned with the company's existing software ecosystem.
- Extended collaboration for 4 months beyond the internship, providing active support for maintenance tasks and ongoing projects.

Member of the Software Club

Board Member

June 2025 - Present

- Managing corporate partnerships with large-scale firms and overseeing financial support processes.
- Organizing high-impact software competitions and hackathons nationwide to contribute to student development and the community ecosystem.

PROJECTS

TÜBİTAK 2209A Project

- Developing a mobile app to monitor patient location, health data, and routines. Building the backend with C# (ASP.NET Core) and Python (FastAPI) microservices, with a React frontend. Contributing to notification systems and data visualization modules using a scalable architecture.

Bi İkrâm Charity Platform

- Developed a Spring Boot backend using Layered Architecture and RESTful APIs. Focused on maintainability through Spring Data JPA, Dependency Injection, and Clean Code principles to ensure a scalable and sustainable codebase.
